An introduction to hierarchical linear modeling

Hierarchical linear models are useful for understanding relationships in hierarchical data structures, such as patients within hospitals or physicians within hospitals. In this tutorial we provide an introduction to the technique in general terms, and then specify model notation and assumptions in detail.

This more recent packages is well suited for “normal” Hierarchical Linear Models with nested groups. We will use this package in the first part of this chapter. The lme4 syntax is based on the linear model syntax we already know from `lm()`. As we already know from the chapter on linear regression:
