DESIGN SCIENCE RESEARCH IN INFORMATION SYSTEMS

This paper proposes a research process for conducting design science in information systems research. The process combines qualitative and quantitative research methods used in IS studies to guide the overall research process.

Outline of a Design Science Research Process

Abstract. Research design is a critical topic that is central to research studies in science, social science, and many other disciplines. After identifying the research topic and formulating questions, selecting the appropriate design is perhaps the most important decision a researcher makes. Currently, there is a plethora of literature presenting multiple approaches to the formulation of research design.

Primary research Perhaps the most important method in design research, this involves you or your team going directly to the source (your customers) to ask questions and gather data. Most often, the goal is to better understand who you are designing for or to validate your ideas with the actual end user. Some examples of primary research include:

Social Science Research: Principles, Methods, and Practices

Reviews. About this book. Consolidating existing knowledge in Design Science, this book proposes a new research method to aid the exploration of design and problem solving within business, science and technology. It seeks to overcome a dichotomy that exists in the field between theory and practice to enable researches to find solutions to problems, rather than focusing on the explanation and exploration of the problems themselves.
