In the federal government, most atmospheric scientists work as weather forecasters with the National Weather Service of the National Oceanic and Atmospheric Administration (NOAA) in weather stations throughout the United States—at airports, in or near cities, and in isolated and remote areas. In smaller stations, they often work alone; in larger ones, they work as part of a team.

What Do Meteorologists Do? - Earth How

Weather radar is an essential weather instrument used to locate precipitation, calculate its motion, and estimate its type (rain, snow, or hail) and intensity (light or heavy). First used during World War II as a defense mechanism, radar was identified as a potential scientific tool when military personnel happened to notice "noise" from precipitation on their radar displays.

Meteorology Instruments for Measuring Weather Systems

Weather Satellites monitor Earth from space, collecting observational data our scientists analyze. NOAA operates three types of weather satellites. Polar orbiting satellites orbit the Earth close to the surface, taking six or seven detailed images a day.

6 tools our meteorologists use to forecast the weather ...

Meteorologists are scientists who study and work in the field of meteorology. Those who study meteorological phenomena are meteorologist in research while those using mathematical models and knowledge to prepare daily weather forecast are called weather forecasters or operational meteorologists. They work in government agencies, private consulting and research services, industrial enterprises, utilities, radio and television stations, and in education. Not to be confused with weather presenters
